## NEW 3D OCCLUSION CUP FOR CS 8100 3D AND CS 8200 3D FAMILIES

A new 3D occlusion cup for the CS 8100 3D and CS 8200 3D families is now available.

### CLINICAL INDICATIONS

Users, including practitioners placing implants, provided feedback asking for a chin support that would allow them to scan a patient in full occlusion. This new 3D occlusion cup has been designed specifically to address those needs and is based on the design of the chin support from the CS 9600.

## ANATOMICAL AREAS

The new 3D occlusion cup was designed to be used with the “jaw” acquisition program using the following fields of view:

- 8 cm x 9 cm
- 8 cm x 5 cm
- 12 cm x 10 cm
- 12 cm x 5 cm

Depending on the clinical needs, clinicians now have the opportunity to choose between the 3D occlusion cup or the current 3D bite block support.

## HOW TO USE

The 3D occlusion cup must be used like the other patient supports of the CS 8100 3D and CS 8200 3D families, meaning a simple clamp on the carbon head support.

## ORDERING INFORMATION

The 3D occlusion cup for CS 8100 3D and CS 8200 3D is an optional accessory and can be purchased separately using the information below when ordering.

CAT #	Description	RRP
<b>5943733</b>	3D OCCLUSION CUP FOR CS 8X00 3D	99,00 €
